2026 Edition • Educational Guide

Important: This publication is for general education only. It is not a financing offer, legal advice, tax advice, or a guarantee of eligibility or approval.

# Welcome: Cash flow matters

A business can be profitable on paper and still struggle to pay expenses on time. One reason is timing: your customers may take 30, 60, or even 90 days to pay invoices while payroll, supplies, insurance, and operating costs come due much sooner.

Invoice factoring is one option some B2B businesses explore to help bridge that gap. It is not the right choice for every business, and the cost and contract terms deserve careful attention.

### What you will learn

- What invoice factoring is—and what it is not
- How the process and payment flow generally work
- Which businesses and invoices may qualify
- What fees, reserves, and contract terms to examine
- Questions to ask before selecting a factoring provider

### Who this guide is for

Owners and decision-makers of businesses that invoice other businesses or government entities for completed work or delivered goods. Factoring is generally not designed for ordinary consumer credit-card sales.

### A helpful starting point

Before exploring any financing arrangement, gather a recent accounts-receivable aging report, sample invoices, customer payment terms, and a clear estimate of your cash-flow need.

# 01 What is invoice factoring?

Invoice factoring is a transaction in which a business sells eligible accounts receivable (unpaid invoices) to a factoring company, typically at a discount. The factoring company advances a portion of the invoice value and generally collects payment from the customer under the agreed arrangement.

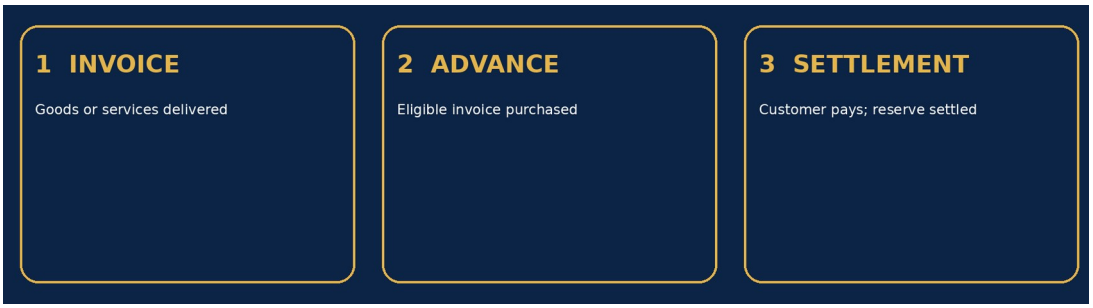
Unlike a traditional term loan, factoring is primarily tied to eligible invoices and the credit quality of the customers responsible for paying them. However, factoring agreements can still create contractual obligations and, in some cases, recourse liabilities.

### Three participants

- Your business: provides goods or services and issues an invoice
- Your customer (account debtor): owes payment on that invoice
- Factoring company: purchases eligible invoices and administers collections under the agreement

### A simple example

A commercial cleaning company completes a contracted service and sends a $20,000 invoice payable in 45 days. Instead of waiting for the customer to pay, it may offer that invoice to a factor. If approved and purchased, the factor provides an advance, then settles the remaining balance after customer payment, less applicable fees and adjustments.



Not all invoices are eligible. Providers may reject disputed, unearned, overdue, related-party, or otherwise ineligible receivables.

# 02 How the process works

**1. Complete the work**
Deliver goods or perform the service and issue an accurate invoice under the customer contract.

**2. Submit documentation**
Provide invoices, supporting records, and customer information for review.

**3. Provider verifies and approves**
The factor may confirm that the receivable is valid, undisputed, assignable, and owed by a creditworthy customer.

**4. Receive an advance**
If the factor purchases the invoice, your business receives the agreed advance, less any upfront charges or offsets.

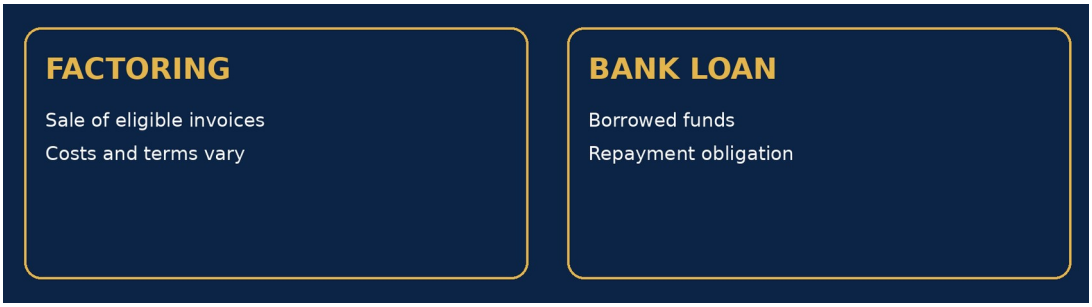
**5. Customer pays the factor**
The customer pays according to the payment instructions and terms of the factoring arrangement.

**6. Receive final settlement**
After payment clears, the factor releases any remaining reserve, minus agreed fees, adjustments, or other amounts owed.

Timing varies. Some providers require account setup, lien searches, customer notices, verification, or additional documentation before the first transaction.

# 03 Factoring vs. a bank loan

Both options can provide business liquidity, but they work differently. The best fit depends on your business needs, receivables, financial condition, and total cost.



### Source of funds

Factoring: proceeds from selling approved invoices. Loan: borrowed money that must be repaid under loan terms.

### Primary underwriting focus

Factoring often emphasizes invoice quality and customer payment history, while also reviewing the seller. Banks may emphasize business cash flow, financial statements, collateral, and borrower credit.

### Payment mechanics

In factoring, customers commonly pay the factor. In a loan, the business generally repays the lender on the agreed schedule.

### Costs and obligations

Factoring may involve discount fees, minimums, and recourse obligations. Loans may involve interest, origination fees, covenants, and collateral.

### Customer experience

Factoring may require notice of assignment and changed remittance instructions. A conventional loan generally does not redirect customer invoice payments.

Neither option is universally cheaper or easier. Compare the full effective cost and obligations—not just the advertised rate.

# 04 Businesses that may benefit

Factoring may be worth exploring when a company sells to commercial or government customers, issues invoices for completed work, and has dependable customers whose payment terms create a cash-flow gap.

### Examples of B2B industries

- Trucking, freight, and logistics
- Staffing and temporary workforce services
- Commercial janitorial and security services
- Manufacturing and wholesale distribution
- Commercial construction subcontractors
- Landscaping and property maintenance
- Government contractors and other qualifying service providers

### Five common situations

- Payroll is due before customers pay
- Suppliers or subcontractors require timely payment
- A new contract increases near-term operating expenses
- Seasonal demand creates uneven cash receipts
- Growth outpaces available working capital

Industry alone does not determine eligibility. Providers assess the specific invoices, customer quality, contract terms, business circumstances, and any existing liens or financing arrangements.

# 05 Understand the numbers

A factoring quote usually includes an advance rate, a fee structure, and rules for the reserve or final settlement. The following illustration is hypothetical—not a quote or promise of terms.

### Illustrative $20,000 invoice

Invoice face value — $20,000

Illustrative advance rate — 85%

Initial advance — $17,000

Initial reserve — $3,000

Illustrative factoring fee — 3% of invoice face value = $600

Final reserve release after customer pays — $2,400, assuming no other fees or adjustments

Total proceeds to your business — $19,400

In this simplified illustration, the $600 fee equals 3% of the invoice. That does not mean the annualized cost is 3%, and the actual cost may be higher if additional fees apply.

### Ask what changes the cost

- Is the fee flat or does it increase with time outstanding?
- Are there origination, wire, due-diligence, minimum-volume, or termination fees?
- What happens if the customer pays late, disputes the invoice, or never pays?
- How are reserves, chargebacks, and adjustments calculated?

Request a written example using your actual invoice amounts and expected payment timing.

# 06 Qualifications and risks

Factoring companies vary, but they commonly review the quality of receivables and whether the underlying goods or services have already been delivered or performed.

### What a provider may request

- Business formation and ownership information
- Accounts-receivable aging and customer list
- Sample invoices, contracts, purchase orders, and proof of performance
- Customer payment history and credit information
- Details of existing loans, liens, and prior factoring arrangements

### Terms that deserve attention

- Recourse vs. nonrecourse: “nonrecourse” often covers only narrowly defined credit events; disputes and other exclusions may remain your responsibility.
- Notice of assignment: your customers may be instructed to pay the factor directly.
- UCC filings and liens: an existing lender may need to consent or release an interest in receivables.
- Minimums and exclusivity: you may be required to factor certain invoices or maintain minimum volume.
- Contract duration and exit fees: review renewal, cancellation, and termination terms.

Have qualified legal and financial advisers review a proposed agreement when appropriate. Do not assume a factoring agreement eliminates bad-debt or collection risk.

# 07 International factoring: Asia-Pacific trade

Businesses that export goods or provide eligible services to commercial customers in Asia-Pacific markets may encounter long payment terms and cross-border collection challenges. International invoice factoring is one financing option to explore for qualifying export receivables.

### What is export factoring?

In export factoring, an exporter sells eligible invoices owed by overseas business customers to a factoring provider. Depending on the arrangement, the provider may advance a portion of the invoice value and help administer collections. Some transactions use a two-factor structure: an export factor in the seller's country and an import factor in the buyer's country. "Import factor" generally describes the overseas partner managing buyer credit risk or collections—not necessarily a separate cash advance to the importer.

### An illustrative transaction

A U.S. manufacturer ships completed goods to an approved commercial buyer in Japan on 60-day payment terms. After reviewing the buyer, invoices, shipping documents, currency, and contractual terms, a specialist factor may agree to purchase eligible receivables and advance funds. The buyer pays under the agreed instructions; the provider then settles the remaining balance after applicable fees and adjustments. This is an example, not a promise of availability or timing.

### Important questions for cross-border invoices

- Which countries, currencies, industries, and overseas buyers does the provider accept?
- Is the arrangement recourse or nonrecourse, and which specific buyer nonpayment events are covered?
- How are exchange-rate changes, conversion costs, fees, and settlement delays handled?
- What shipping, customs, delivery, tax, and proof-of-performance documents are required?
- Who handles overseas collections, disputes, sanctions screening, and regulatory compliance?

Cross-border factoring can involve additional legal, currency, documentation, sanctions, and collection risks. Availability varies significantly by country, buyer, invoice, and provider. A business should seek qualified legal, tax, and trade advice where appropriate. NoteFactorConnect can help explore potential provider connections but does not guarantee international factoring placement.

# 08 Frequently asked questions

### Is factoring a loan?

A true sale of receivables is structured differently from a loan, but legal treatment depends on the actual agreement and applicable law. Review the contract rather than relying on a label.

### Will my customers know?

Often yes. Many arrangements require a notice of assignment or updated payment instructions. Ask how the factor communicates with customers.

### Do I need perfect personal credit?

Not necessarily. Customer creditworthiness can be central, but providers may still review business and owner information.

### Can I factor government invoices?

Sometimes, subject to provider policy and applicable assignment rules, contract terms, and verification requirements.

### Can I factor just one invoice?

Some providers offer selective or spot factoring; others require ongoing commitments or minimum volumes.

### What if a customer pays late or disputes an invoice?

Fees may rise, reserves may be held, and the business may have repurchase or chargeback obligations, depending on the agreement.

Tip: Ask each provider to explain these points in writing before signing.

# 09 Your next step

A good factoring decision begins with understanding the business need—not simply finding the fastest advance. Compare options carefully and ask how the arrangement will affect your customers, cash flow, and margins.

### Your five-point readiness checklist

- I invoice other businesses or government entities for completed work or delivered goods.
- I can identify which invoices are outstanding and when customers are expected to pay.
- I know how much working capital I need and for how long.
- I understand that fees, eligibility, and contract terms vary by provider.
- I am prepared to compare written proposals and ask questions before signing.

### How NoteFactorConnect can help

NoteFactorConnect is an independent factoring consultant. We help business owners understand invoice factoring and explore potential connections with third-party factoring providers based on their business circumstances.
